

Name – Apurba Das

**Registration Number –
25BHI0010**

Branch - CSE(Health Informatics)

Year – 2025

Course Code – CSE0001

Date – 31/03/26

Task 1:

I used **Canva** to create my infographic because it is simple, beginner-friendly, and provides many ready-made templates, icons, and design elements. It helped me organize my ideas clearly without needing advanced design skills. My design was based on the topic of **digital literacy for students**. In the infographic, I included important points such as **what digital literacy means, useful digital tools for students, safe internet practices, and maintaining a professional online presence**. I used icons, sections, and colors to make the information visually appealing and easy to understand.

One thing I found interesting while making it was how design can make information more engaging. A plain paragraph of text may look boring, but when the same content is arranged with visuals and headings, it becomes much easier to read and remember. One difficulty I faced was deciding how to fit all the information into a single design without making it look crowded. I had to balance the amount of text, choose suitable icons, and keep the layout neat. Overall, using Canva was a helpful and creative experience.

Task 2:

For my professional and academic growth, I chose **LinkedIn, GitHub, and Kaggle** as the main platforms I plan to use over the next four years. **LinkedIn** is a professional networking platform where students can build an online presence, connect with peers, seniors, teachers, recruiters, and industry professionals, and stay updated about internships, events, and career opportunities. I plan to use LinkedIn to create a strong professional profile, share my achievements, and build valuable connections.

GitHub is a platform used to store, manage, and showcase coding projects. It is especially useful for developers because it helps track progress, collaborate with others, and maintain a portfolio of work. Over the next four years, I will use GitHub to upload my projects, practice version control, and demonstrate my technical skills to recruiters and collaborators.

Kaggle is a platform for data science and machine learning where users can learn from datasets, notebooks, and competitions. I plan to use Kaggle to improve my AI and data analysis skills, explore real-world datasets, and gradually participate in competitions. Together, these platforms will help me build skills, credibility, and career opportunities during my college journey.

Task 3:

For this task, I used **Google Forms** to create a Digital Literacy Awareness Quiz. Google Forms is an easy-to-use tool that allows users to design surveys, quizzes, and questionnaires with different types of questions such as multiple choice and short answer. I created a quiz consisting of five questions that focused on topics like digital literacy, safe internet practices, password security, and professional online presence. I also explored features like adding answer keys, marking correct responses, and making the form interactive for participants.

While working on this, I practised structuring questions clearly and choosing the appropriate question types to make the quiz effective and easy to understand. I also learned how to organize information logically and ensure that the quiz covers important concepts without being too lengthy.

These tools will help me academically by improving my ability to collect and analyze responses, which can be useful for projects, surveys, and research work in college. Google Forms can also be used for feedback collection, quizzes, and collaboration with classmates. Overall, it is a practical tool that supports both learning and efficient data management.

Task 4:

Poor digital communication can lead to serious misunderstandings and problems. For example, a student once sent an email to a professor without a subject line, greeting, or proper tone, simply writing “Send marks fast.” This came across as rude and unprofessional, which negatively affected the student’s impression. As a result, the professor delayed responding and did not take the request seriously.

This situation could have been handled much better by using proper email etiquette. The student should have included a clear subject line, a polite greeting, and a respectful tone while clearly explaining their request. Professional communication helps build a positive impression and ensures that messages are taken seriously. This example shows that even small mistakes in digital communication can create unnecessary problems and misunderstandings.

Task 5:

While researching this topic, what surprised me the most was how easily people fall victim to cyber fraud, especially UPI scams. Many frauds do not involve advanced hacking but rely on simple tricks like fake calls, QR codes, or payment requests. I realized that lack of awareness is the biggest weakness that attackers exploit. It was also surprising to learn that once a UPI transaction is completed, recovering the money is very difficult.

As a result, one habit I will personally change is being more cautious with digital transactions. I will always double-check payment requests, avoid scanning unknown QR codes, and never share sensitive details like OTP or UPI PIN with anyone. I will also make sure to enable two-factor authentication on all important accounts. These small changes can significantly reduce the risk of becoming a victim of cybercrime.
